Made in CHINA

WHAT CLINICIANS WANT.

WHAT PATIENTS NEED.

On any given day, about one in 31 hospital patients has at least one healthcare-associated infection (HAI)¹. Bloodstream infections (BSI) associated with the use of intravascular catheters are common, dangerous and costly.²

Poor central venous catheter (CVC) and peripherally inserted catheters (PIVC) insertion, maintenance and removal practices increase the risk for BSI and other infections associated with the use of intravascular catheters.³

Support your clinicians in meeting guidelines for infection prevention with **HALYARD* Transparent Film Dressings**.⁴ Their ease of application and removal, clear and breathable construction, and flexible, long-lasting design help protect IV insertion sites with comfort and control.

HALYARD*

TRANSPARENT FILM DRESSINGS

- **Simple application:** Frame delivery system with unique pull tab for easy frame removal
- **Wound visualization:** Clear film protects skin, IV sites and surgical incisions while allowing visibility to access the wound site
- **Flexible design:** Conforms easily to areas that are difficult to apply dressings
- **Long-lasting:** Can be left securely in place for several days
- **Breathable defense:** Excellent moisture vapor permeability yet impermeable to bacteria and liquids
- **Patient comfort:** Removes easily and is non-irritating with repeated use

As part of O&M Halyard's Integrated Skin Health Solutions portfolio, HALYARD* Transparent Film Dressings deliver the same trusted reliability, quality and value you've come to expect from the HALYARD* brand.

From wound and incontinence care, to patient cleansing and ostomy care, our comprehensive portfolio spans across the continuum of skin and wound management, providing solutions from head-to-toe and from hospital to home.

Our complete skin health portfolio addresses:
